

EDUCATION

Gokaraju Rangaraju Institute of Engineering

BTech in Computer Science and Engineering (Artificial Intelligence), GPA: 8.75

Hyderabad, India

Expected 2027

TECHNICAL SKILLS

Languages & Databases: Java, Python, JavaScript, SQL, PostgreSQL, MySQL, MongoDB

Backend & Frameworks: REST APIs, Node.js, Express, Flask

Frontend & UI: React, Tailwind CSS, Bootstrap

DevOps & Tools: Git, GitHub Actions, Docker, Postman, Linux

Core Concepts: OOP, Data Structures & Algorithms, JWT Authentication, CI/CD

AI & Data: TensorFlow, PyTorch, Pandas, NumPy, OpenCV

Creative Tools: Blender, After Effects, Premiere Pro, Photoshop

INVOLVEMENT & EXTRACURRICULARS

- **J.P. Morgan Chase Code for Good:** Spearheaded a 7-member agile engineering team to architect a MERN-stack application for automating leftover food distribution; delivered the solution within a highly competitive 24-hour sprint.
- **Secretary, Robotics Club - GRIET:** Orchestrated inter-college events and technical workshops by coordinating technical and creative teams; mentored junior members in end-to-end robotics project development.
- **Smart India Hackathon:** Engineered the frontend architecture for an urban planning platform; directed a multidisciplinary team through requirement analysis to deliver a centralized municipal resource-sharing platform.

PROJECTS

- **Xerox Automation System**
Full-Stack Automation Platform Mar 2025 – Present
 - Architected a React and Node.js automation platform to streamline print pre-ordering and document workflows.
 - Onboarded 867 users in the first week after launch, highlighting rapid user growth and platform scalability.
 - Engineered a secure Express.js backend with OTP/QR authentication and integrated payment processing.
 - Implemented batch PDF upload pipelines to optimize high-volume document handling and request reliability.
 - **Skills:** React, Node.js, Express, MongoDB, Functional Testing — **Live Demo:** [zerox.studio](#)
- **HDR Image Reconstruction using CNN**
Computer Vision Research Project 2025
 - Engineered a PyTorch CNN pipeline for converting LDR images into high-fidelity HDR outputs.
 - Optimized image preprocessing and inference workflows using OpenCV and NumPy computer vision operations.
 - Developed a Streamlit application for real-time HDR generation, visualization, and image comparison.
 - **Skills:** PyTorch, CNNs, Computer Vision, Streamlit, OpenCV, NumPy
- **StickTyping - AI Powered Controller Typing System**
Human-Computer Interaction Research 2026
 - Designed a dual-thumbstick typing interface to improve controller-based text input efficiency and usability.
 - Developed a TensorFlow/Keras AI engine combining BiLSTM gesture recognition with Trie autocomplete.
 - Implemented haptic and audio feedback systems to reduce character input errors and visual dependency.
 - **Skills:** TensorFlow/Keras, Deep Learning, BiLSTM, Data Structures, AI Prediction Systems, HCI

INTERESTS

Animation, Video Editing, Filmmaking, Photography, Badminton.
